HydroxConnect

The All-in-One Platform for Modern
Hydropower Operations

Empowering hydropower teams with control, collaboration, and instant support

HydroxConnect isn't just an online SCADA system - it's your central IoT platform for seamless plant operation, collaboration, and support. Built for hydropower operators, engineers, assets and project managers who demand more: more insight, more control, and more efficiency. HydroxConnect starts at the project design stage with a powerful document submittal platform.

During operation, it consolidates all your plant data - hydro and beyond - into a single, intuitive interface. Make real-time decisions, analyze trends, and control your plant to unlock its full potential. For troubleshooting, HydroxConnect offers a plant-specific chatbot for instant support, plus an integrated ticket system for direct access to Global Hydro experts.

HydroxConnect

Features

Centralized Monitoring

Unified Control: Monitor and control multiple plants from one platform - no matter the technology or supplier.

Real-Time & Historical Data: Instantly access live telemetry and deep-dive into historical performance.

Critical Alerts: Stay ahead with asset condition overviews and immediate event notifications.

Customizable Dashboards

Tailored Views: Mix and match data from any plant. Create dashboards for specific roles, KPIs, or operational needs.

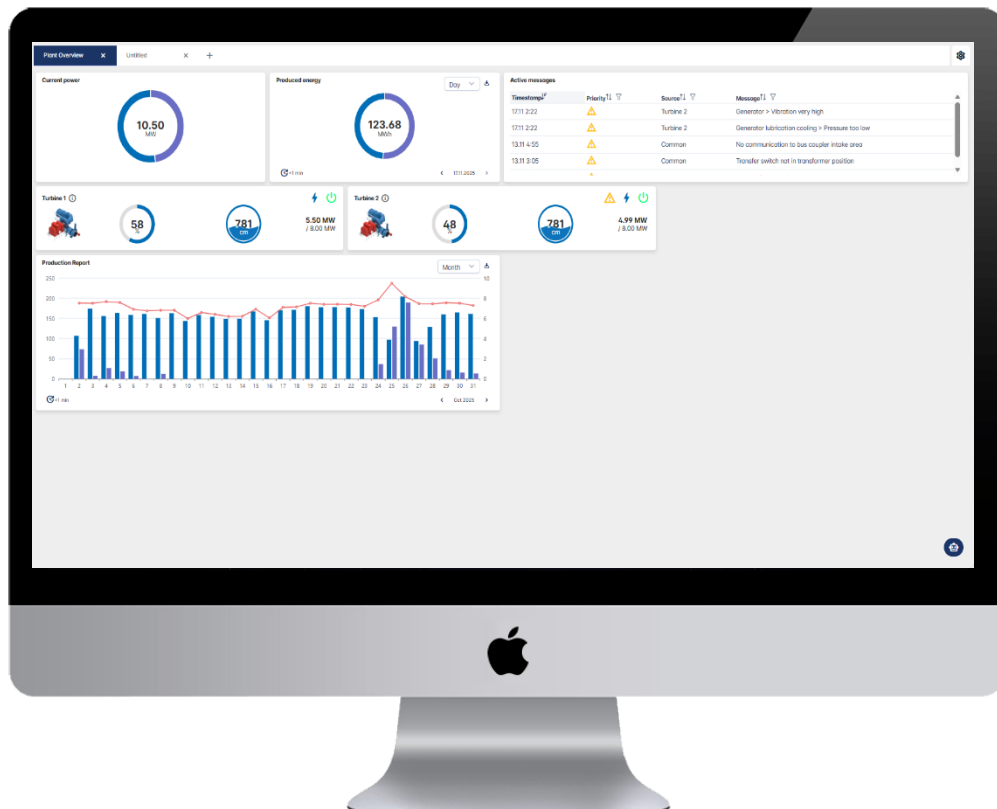

Multi-Plant & Single-Plant Dashboards: Get the big picture or zoom in for detailed insights.

Supplier Independence

Universal Connectivity: Integrates all types of turbines and control systems - regardless of manufacturer - using dedicated hardware and flexible software interfaces.

Seamless Integration: Centralized monitoring and control across mixed-technology plants, eliminating vendor lock-in.

Future-Proof: Effortlessly connect new or existing assets as your portfolio grows.

Features

Mobile & Desktop Access

Any Device, Anywhere: Responsive design for seamless access on desktop and mobile.

Always On: Stay connected to your operations - wherever you are.

Enterprise-Grade Security: User authentication via Azure Active Directory and role-based access management.

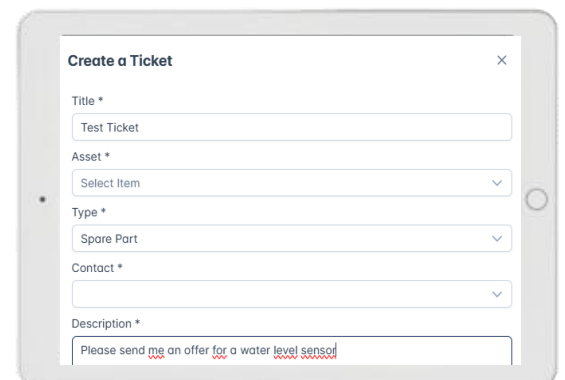

Troubleshooting Support

Intelligent Chatbot: Instantly access plant documentation and control logic. Get step-by-step troubleshooting guidance - reduce downtime and empower your team.

Fully Integrated Ticket System: Professional error tracking and support requests, with digital records and seamless collaboration with Global Hydro experts. Multilingual support and real-time updates ensure fast, effective solutions.

Document Exchange

Integrated Collaboration: Upload, comment, and approve project documents. Streamline workflows with category filters and secure sharing.

The screenshot shows a tablet displaying a 'Create a Ticket' form. The form includes the following fields: 'Title *' with the value 'Test Ticket', 'Asset *' with a dropdown menu showing 'Select Item', 'Type *' with a dropdown menu showing 'Spare Part', 'Contact *' with a dropdown menu, and 'Description *' with the text 'Please send me an offer for a water level sensor'. The form is displayed on a tablet interface with a close button in the top right corner.
